Loader/Tool Carrier Excels in Both

Link-Belt went after buyers who have trouble deciding between a tool carrier and a wheel loader with the Power-Link loader linkage. The boom allows the operator to lift as much weight as competitive tool-carrier machines and keep the load level on pallet forks. Breakout force remains comparable with competitive loaders. A single lever controls forward, reverse, up shift, downshift, and kick down functions. LBX entered the loader business this year with the three-model line spanning 105 to 165 horsepower. Estimated list prices: \$108,000 to \$155,000.

POWER-LINK GEOMETRY™

Power-Link™ Geometry is the latest innovation in wheel loader technology. With the flip of a switch, Link-Belt loaders go from a powerful digging machine to a versatile tool carrier with automatic level-lift without sacrificing breakout force across the lift range. This exclusive feature gets you two machines for the price of one so you can handle any application. Bottom Line: More Value for Your Investment
